Hi Camille,

Interesting request, from a building code perspective using propane for gas appliances would be ok. If Planning is ok with the tank being above ground, we wouldn't require for it to be below grade. The tank would have to be installed per the manufacturers requirements.

At the very minimum, the developer needs to submit a plan showing the proposed location of the tank, the size and how the gas line will be installed.

I would also suggest that Bob reach out to the fire district and verify if they have any specific requirements in addition to the fire code.

A licensed plumber or mechanical contractor would be required to perform the cross over.

Best,
Kevin

Subject: Propane in lieu of gas for TCO?

Hi Kevin,

For 3 lots in the highlands, Bob can't get PG&E to connect the gas for several several months. He asked whether he could replace the orifices of the gas appliances (cooktop and water heater) with propane fuel (does tank need to be buried?) for temp occupancy? He says it would be for about 30 days, until PG&E connection. He says he may fall out of escrow on the houses if he can't get a TCO.

Is this allowed?

Thanks
